Thanks for purchasing the DueProLogic FPGA Development System.

We have recently upgraded the DueProLogic software to version 4.0. This new software release makes the DueProLogic incompatible with the previous releases of software. This incompatibility is due to a change in the EEPROM attached to the FT2232H chip. The board hardware has not changed and still contains all the great features users have come to expect.

- Altera Cyclone IV FPGA
- 54 Inputs/Outputs 3.3V only
- High Speed bi-directional USB data communications with PC
- On Board Flash programming (for configuration of FPGA)
- 36 user LEDs
- Two push buttons
- SD Card connector

All documentation associated with this board including driver, documentation, FPGA projects are located on the Earth People Technology website at:

https://www.earthpeopletechnology.com/wp-content/uploads/2015/08/DUEPROLOGIC_USB_FPGA_PROJECT_4.0_DVD.zip

This documentation includes:

- User Manual
- Data Sheet
- Project DVD
- Schematics

How to Install the USB Driver for the DueProLogic under Windows 10

The DueProLogic uses the default FTDI VCP driver. You can either:

- Download directly from the FTDI website:
  https://www.ftdichip.com/Drivers/CDM/CDM21228_Setup.zip
- Locate the Drivers/EPT_Serial_Driver folder on the DVD included with the DueProLogic
- Download the project DVD from the Earth People website
  https://www.earthpeopletechnology.com/wp-content/uploads/2015/08/DUEPROLOGIC_USB_FPGA_PROJECT_4.0_DVD.zip

After download, follow the tasks to install the driver. After these tasks are successfully completed, you can proceed with the following sections.
